

Appendix A - Geographe Marine Park Natural Values Report

South-west Marine Parks Network

Table of contents

Natural Values	1
Benthic ecosystem extent – dominant habitat types	2
Benthic ecosystem extent – habitat distribution and probability	3

Natural Values

Understanding of natural values

Benthic ecosystem extent – dominant habitat types

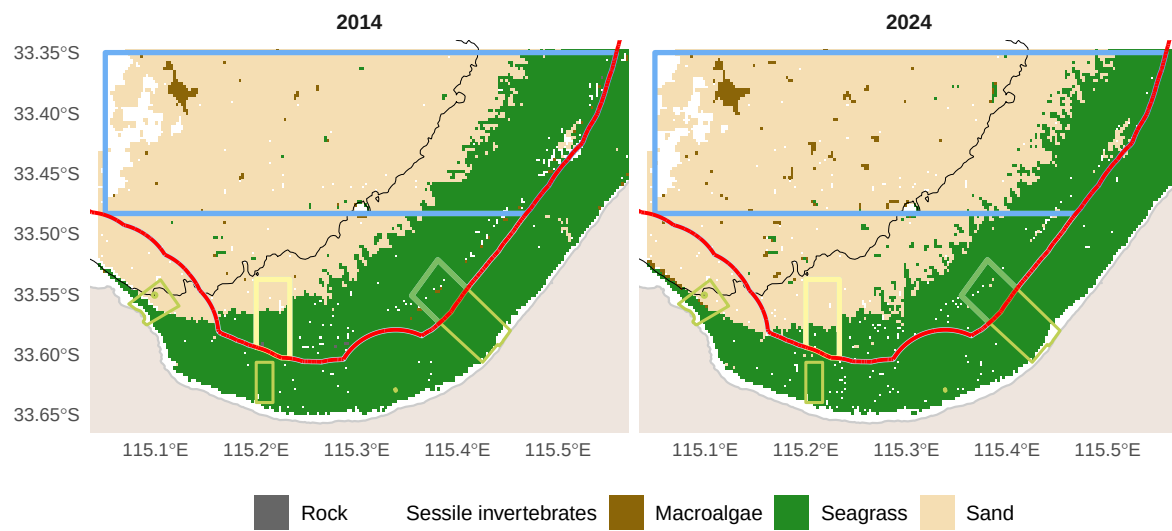

Figure 1: Predicted dominant habitat type

Benthic ecosystem extent – habitat distribution and probability

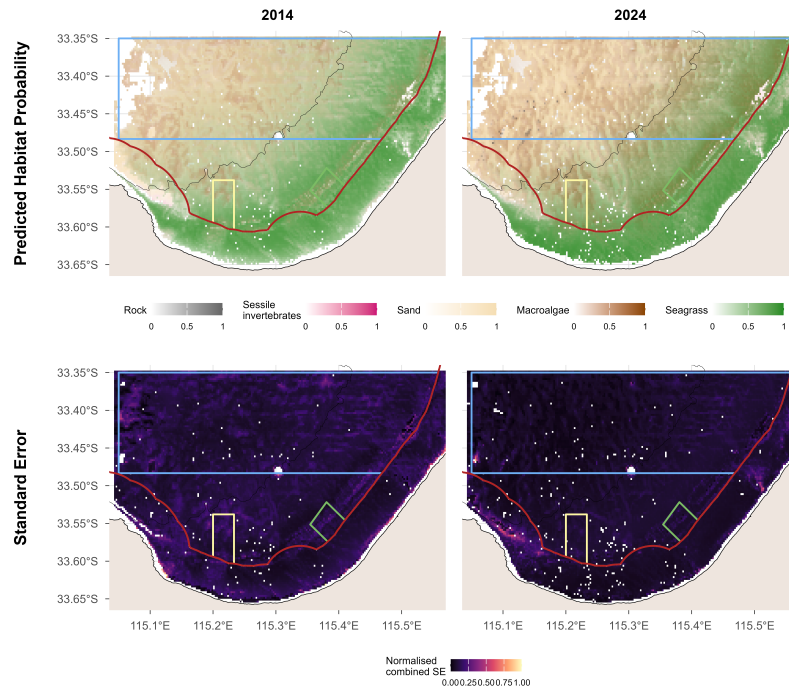

Figure 2: Predicted habitat distribution probability and uncertainty

Ignoring unknown labels:

```
* fill_ggnewscale_2 : "State Marine Parks"
```

Warning: No shared levels found between `names(values)` of the manual scale and the data's fill values.

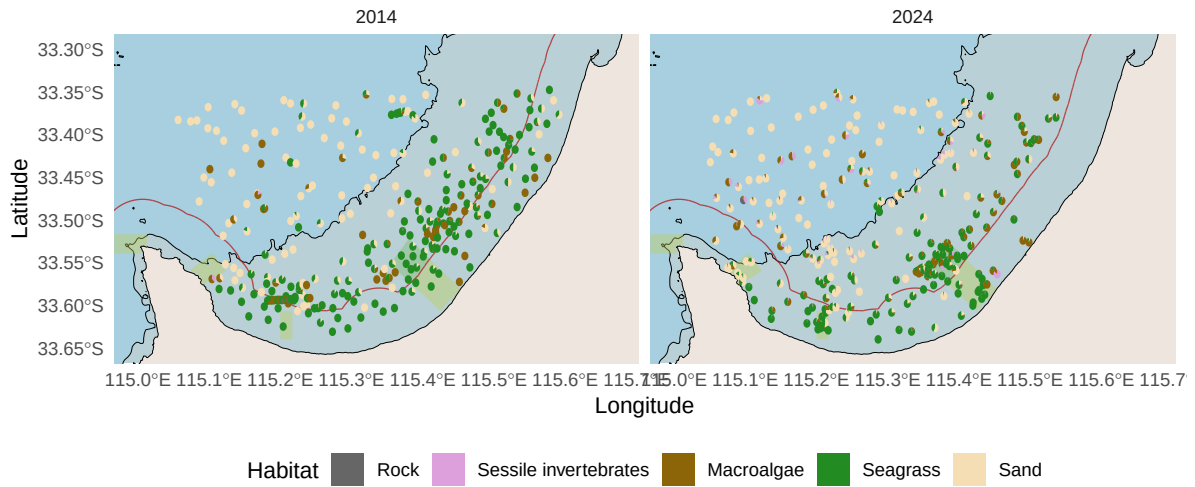

Figure 3: Habitat classes observed in benthic imagery. Habitat classes observed in spatially balanced stereo-BRUV and drop-camera imagery visualised as spatial pie charts. The green polygon represents the extent of no-take National Park Zones and State no-take sanctuary zones. The bathymetric contour shown is 30 m which represents ecosystem depth contours.
